

Internet /
Untrusted Sources

```
graph TD; A[Internet / Untrusted Sources] -- "Direct SSH Denied" --> B[Firewall  
Default-Deny Inbound Policy]; B -- "Permitted Internal Traffic" --> C[Internal LAN  
Approved Systems Only]; C -- "Approved Backup and Administration Access" --> D[backup01  
Production Backup Server];
```

The diagram is a vertical flowchart with five main components. At the top is a light red rounded rectangle labeled 'Internet / Untrusted Sources'. A vertical line descends from it, with a small red T-bar at the top, and the text 'Direct SSH Denied' is placed to the right of the line. This line leads to a light orange rounded rectangle labeled 'Firewall Default-Deny Inbound Policy'. Another vertical line descends from the firewall box, with a small green T-bar at the top, and the text 'Permitted Internal Traffic' is placed to the right of the line. This line leads to a light blue rounded rectangle labeled 'Internal LAN Approved Systems Only'. A final vertical line descends from the LAN box, with a small green T-bar at the top, and the text 'Approved Backup and Administration Access' is placed to the right of the line. This line leads to the bottom-most box, a light green rounded rectangle labeled 'backup01 Production Backup Server'. All boxes have a colored border matching their fill color.

Direct SSH Denied

Firewall
Default-Deny Inbound Policy

Permitted Internal Traffic

Internal LAN
Approved Systems Only

Approved Backup and
Administration Access

backup01
Production Backup Server
